- Step 1: Unscrew The Old Shell Fitted on Tap With Aerator.**
- Step 2: Replace The Old Aerator In Shell With New Aerator**
- Step 3: Place The Washer Between Aerator & Tap And Tighten The Shell Back To Tap.**

II. Our Flow Regulators (Water Savers) can be installed with Angle Cocks and at Faucets Inlet near its connection and also with Hand or Overhead Showers it can help us save a considerable amount of water and even help us to save money on energy bills as the energy required to heat the water and also the energy required to pump the water from the main municipal pumping room till your faucet is reduced because of reduction in usage of water.

Our **Water Savers** can be easily installed in the below mentioned fittings as follow.

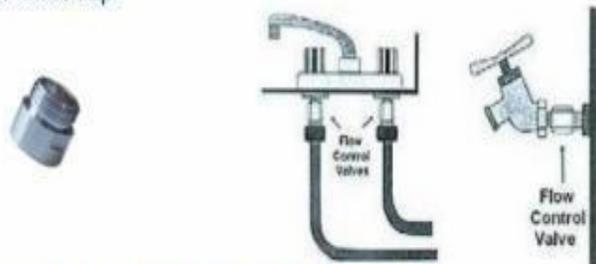

SAVE WATER BY UPTO 60%

Install flow reducer on sink taps/faucet to reduce the water flow from 12-15 litres/minute to 6 to 8 litres/minute. Saving upto 60% is possible. These flow restrictors will get installed in inlet pipe line of sink taps, hence cannot be removed so easily.

Different kind of flow restrictors available. Basis on client requirement, suitable suggestion is provided. We also have aerators for Sink Tap.

**One time Investment * Easy & Quick To Install
Instant Water Saving * Quick Payback**
